# 5      Pyrazoles and pyrazolopyrimidines having CRF antagonist activity

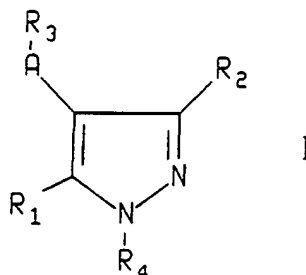

This invention relates to pyrazoles and pyrazolopyrimidines, pharmaceutical compositions containing them, and methods of administering them to subjects in need of their corticotropin-releasing factor (CRF) antagonist activity.

CRF antagonists are mentioned in U.S. Patents 4,605,642 and 5,063,245  
 10    referring to peptides and pyrazolinones, respectively. The importance of CRF antagonists is set out in the literature, e. g. as discussed in U.S. Patent 5,063,245, which is incorporated herein by reference. A recent outline of the different activities possessed by CRF antagonists is found in M. J. Owens et al., Pharm. Rev., Vol. 43, pages 425 to 473 (1991), also incorporated herein by reference. Based on the research  
 15    described in these two and other references, CRF antagonists are effective in the treatment of a wide range of diseases including stress-related illnesses, such as stress-induced depression, anxiety, and headache; abdominal bowel syndrome; inflammatory diseases; immune suppression; human immunodeficiency virus (HIV) infections; Alzheimer's disease; gastrointestinal diseases; anorexia nervosa; hemorrhagic stress;  
 20    drug and alcohol withdrawal symptoms; drug addiction, and fertility problems.

A mixture of 10.60 g (0.10 mol) of para-xylene and 16.53 g (0.105 mol) of  $\alpha$ -bromoacetyl chloride in 300 mL of 1,2-dichloroethane was cooled in an ice bath under an atmosphere of dry N<sub>2</sub> and treated portionwise with 14.15 g (0.106 mol) of aluminum chloride. The reaction mixture was stirred for 30 minutes at 0 - 5°C and then for 2.5 hours at room temperature. The mixture was then poured onto ice and the aqueous layer was acidified with concentrated HCl. The organic layer was separated and the aqueous layer was extracted twice with methylene dichloride. The combined organic extracts were dried with brine solution and with magnesium sulfate. The solvent was evaporated to give 23.87 g of an amber oil which was for use in the next reaction without further purification.

##### B. 2-Cyano-2',5'-dimethylacetophenone.

The product of the above reaction (approximately 0.10 mol) was dissolved in 300 mL of ethanol and was treated with a solution of 16.25 g (0.25 mol) of potassium cyanide in 30 mL of water and the resulting mixture was refluxed for 90 minutes. After

cooling, the ethanol was stripped from the mixture on the rotary evaporator and the residues were made slightly acidic with concentrated hydrogen chloride. The product was extracted into ethyl acetate using precautions to avoid escape of hydrogen cyanide. The organic extracts were dried with brine and with magnesium sulfate and  
5 evaporated to a gummy semi-solid. This was triturated repeatedly with hot hexane which, on cooling, deposited needles to give the desired product, 8.50 g (49% for the two reactions), m.p. 75 - 76°C.

C. 3,3-Bis-methylthio-2-(2,5-dimethylbenzoyl)-acrylonitrile.

After stirring for 2 hours at room temperature, the reaction mixture was poured into cold water and the aqueous layer was extracted three times with ethyl acetate. The combined extracts were washed three times with water and then dried with brine and magnesium sulfate. Evaporation gave 8.96 g of the title compound as a heavy orange oil which crystallized in the refrigerator. The analytical

A solution of 60 mg (0.14 mmol) of 5-amino-4-(2-chlorobenzoyl)-3-methoxy-1-(2,4,6-trichlorophenyl) pyrazole prepared according to Example 7 in 5 mL of dry dimethyl sulfoxide was treated with 22 mg (0.88 mmol) of oil-free sodium hydride to give a yellow solution. After 1 hour at room temperature, 0.2 mL (0.46 g, 3.21 mmol) of methyl iodide was added. After stirring for 5 hours, the reaction mixture was poured into water and the product was extracted into ethyl acetate. After drying with brine and magnesium sulfate, the solvent was removed to give the title product as a one-spot foam. <sup>1</sup>H-NMR (CDCl<sub>3</sub>): 2.77 (6H, s), 3.63 (3H, s), 7.24 - 7.42 (4H, m), 7.48 (2H, s).

Example 9A. 3,3-Bis-ethoxy-2-(3-trifluoromethylbenzoyl)-acrylonitrile.

Sodium (0.126 g, 5.5 mmol) was dissolved in 15 mL of ethanol and 20 mL of dioxane was added followed by 1.59 g (5.0 mmol) of 3,3-bis-methylthio-2-(3-trifluoromethylbenzoyl)-acrylonitrile and the reaction mixture was refluxed for 4 hours and let stir overnight at room temperature. This compound was relatively unstable to aqueous conditions and was not isolated as such. Instead, an aliquot of the mixture was stripped and the product was identified by 300 MHz proton NMR: NMR (DMSO-d<sub>6</sub>): 1.14 (6H, t, J = 7), 3.45 (4H, q, J = 7), 7.44 - 8.16 (4H, m).

B. 5-Amino-1-(2,6-dichloro-4-trifluoromethylphenyl)-3-ethoxy-4-(3-trifluoromethylbenzoyl)pyrazole.

An aliquot of the above solution of step A containing approximately two millimoles of 3,3-bis-ethoxy-2-(3-trifluoromethylbenzoyl)acrylonitrile was reacted with 0.49 g (2.0 mmol) of 2,6-dichloro-4-trifluoromethylphenylhydrazine in 10 mL of ethanol under reflux overnight. The cooled mixture was poured into dilute hydrogen chloride (HCl) and the product was extracted into ethyl acetate (EtOAc), washed with water and brine, and dried over magnesium sulfate (MgSO<sub>4</sub>). Chromatography on silica gel with 4:1 hexane/EtOAc gave the title product, 320 mg (31%), m.p. 77 - 78°C from pentane.

Example 10

5-Amino-1-(2,6-dichloro-4-trifluoromethylphenyl)-4-(2,5-dimethylbenzoyl)-3-ethoxypyrazole.

A solution of 0.26 g (1.5 mmol) of 2,5-dimethylbenzoylacetonitrile, 0.34 mL (0.31 g, 1.60 mmol) of tetraethylorthocarbonate and 0.30 mL (0.33 g, 3.20 mmol) of acetic

anhydride in 10 mL of EtOAc was refluxed overnight. The solvent was evaporated and 10 mL of absolute ethanol was added and then stripped. The residues were dissolved in 10 mL of ethanol, 368 mg (1.5 mmol) of 2,6-dichloro-4-trifluoromethylphenylhydrazine and 0.7 mL (0.51 g, 5.0 mmol) of triethylamine were added, and the mixture  
5 was refluxed for 90 minutes. The mixture was poured into water, extracted with EtOAc and the organic extracts were washed with dilute HCl and brine, and dried over  $\text{MgSO}_4$ . Evaporation gave a gum which was chromatographed on silica gel with 4:1 hexane/EtOAc to give the title product which crystallized from pentane, 15 mg (2%), m.p. 99 - 101°C.

Example 111-(2,6-Dichloro-4-trifluoromethylphenyl)-5-methyl-4-(3-methylbenzoyl)-3-methylthiopyrazole.

A solution of 2.97 g (16.9 mmol) of 4-(3-methylphenyl)butane-2,4-dione and 4.04 mL (5.14 g, 67.6 mmol) of carbon disulfide in 60 mL of dry dimethyl sulfoxide was  
15 treated portionwise with 0.89 g (37.1 mmol) of oil-free sodium hydride at 15 - 18°C. After stirring 30 minutes, 2.31 mL (5.27 g, 37.1 mmol) of methyl iodide was added dropwise and the reaction mixture was allowed to stir at room temperature for 1 hour. It was then poured into water and the product was extracted into ether, backwashed with water and dried over  $\text{MgSO}_4$  to give 4.30 g (91%) of an oil which crystallized in the  
20 refrigerator overnight, m.p. 44 - 46°C.  $^1\text{H-NMR}$  ( $\text{CDCl}_3$ ): 2.16 (3H, s), 2.38 (6H, s), 2.72 (3H, s), 7.26 - 7.38 (2H, m), 7.58 - 7.74 (2H, m). A mixture of 1.95 g (6.96 mmol) of 3,3-bismethylthio-2-(3-methylbenzoyl)-2-acetylene and 1.71 g of 2,6-dichloro-4-trifluoromethylphenylhydrazine in 20 mL of ethanol was refluxed for 6 hours and then stirred at room temperature for 48 hours. The reaction mixture was poured into dilute  
25 HCl solution and the product was extracted into EtOAc. The solution was dried and concentrated and the residues were chromatographed on silica gel with 10:1 hexane/EtOAc to give the title product which crystallized from pentane, 1.67 g (52%), m.p. 103 - 104°C.

Example 12

30 5-Amino-1-(2,6-dichloro-4-trifluoromethylphenyl)-4-(5-[3-hydroxypropyl]-2-methylbenzoyl)-3-methylthiopyrazole.

A solution of 0.530 g (1.0 mmol) of 5-amino-1-(2,6-dichloro-4-trifluoromethylphenyl)-4-(5-[ $\beta$ -methoxycarbonylethyl]-2-methylbenzoyl)-3-

methythiopyrazole in 10 mL of THF was cooled in an ice bath while 1.33 mL of a 1.5 M solution of DIBAL in THF was added. The reaction mixture was warmed to room temperature and then quenched with water. The product was extracted into EtOAc, dried and concentrated. The residues were chromatographed on silica gel using mixtures of hexane/EtOAc to elute the title product which was isolated as an amorphous foam, 174 mg (34%). Anal. #### Example 13

[5-Amino-1-(2,6-dichloro-4-trifluoromethylphenyl)-3-methylsulfonyl-1H-pyrazol-4-yl]-(2,5-dimethylphenyl)methanone.

To a solution of 200 mg (0.42 mmol) of [5-amino-1-(2,6-dichloro-4-trifluoromethylphenyl)-3-methylsulfonyl-1H-pyrazol-4-yl]-(2,5-dimethylphenyl)methanone in 10 mL of THF was added 0.176 g (2.10 mmol) of anhydrous sodium bicarbonate followed by a solution of 145 mg (0.42 mmol) of 3-chloroperoxybenzoic acid in 8 mL of THF. After two hours at room temperature, 0.5 g of sodium bicarbonate and an additional 290 mg (0.84 mmol) of 3-chloroperoxybenzoic acid was added. The reaction mixture was heated briefly to 50°C, let cool and stirred overnight at room temperature. The reaction mixture was added to water and the product was extracted into ethyl acetate. The organic extracts were washed with dilute sodium bicarbonate solution and then dried and evaporated. The title compound was crystallized from ether to give 150 mg (70% yield) of colorless crystals, m.p. 193.5 - 194.5°C

Example 15A. 3-Trifluoromethylphenylthioacetonitrile.

To sodium (0.62 g, 27.0 mmol) dissolved in 40 mL of ethanol was added 4.79 g (26.9 mmol) of 3-trifluoromethylthiophenol and 2.04 g (27.0 mmol) of chloroacetonitrile. The reaction mixture was heated at reflux for 1 hour and then  
10 stirred overnight at room temperature. To the cooled reaction mixture was added one volume of ether and the precipitated solids were removed by filtration. The filtrate was evaporated on the rotary evaporator to give the product as an oil in essentially quantitative yield. This material was used in the following reaction without further purification.

15

B. 3-Trifluoromethylphenylcyanomethylsulfoxide.

A solution of 3.00 g (13.8 mmol) of 3-trifluoromethylphenylthioacetonitrile in 130 mL of methylene chloride was cooled to 5°C under dry N<sub>2</sub> and treated with 4.89 g (28.35 mmol) of m-chloroperbenzoic acid. The reaction mixture was stirred for 48 hours at room temperature and then cooled in ice, after which the insolubles were  
20 removed by filtration. The filtrate was washed with 10% sodium sulfate solution until all traces of peroxides had been removed and then dried over magnesium sulfate and evaporated to a pale yellow oil which was used in the subsequent reaction without further purification.

C. 3,3-Bis-methylthio-2-(3-trifluoromethylphenylsulfonyl)acrylonitrile.

25 A solution of 13.82 mmol (crude product) of 3-trifluoromethylphenylcyanomethylsulfoxide in 30 mL of dry dimethylsulfoxide and 1.25 mL (1.58 g, 20.7 mmol) of CS<sub>2</sub> was cooled to about 15°C in an ice bath under dry nitrogen. Then 0.99 g (41.5 mmol) of oil-free sodium hydride was added portionwise below 20°C and the deep red solution was let stir at room temperature for 75  
30 minutes. The reaction mixture was cooled to 15°C, quenched with 2.58 mL (5.89 g, 41.5 mmol) of methyl iodide and let stir overnight at room temperature. The reaction mixture was poured into ice/water and let granulate for 3.5 hours. The product was filtered and air dried to give 3.51 g (72%) of the product. The analytical sample was crystallized from EtOH/H<sub>2</sub>O, m.p. 109-110°C.

D. 5-Amino-1-(2,6-dichloro-4-trifluoromethylphenyl)-4-(3-trifluoromethylbenzenesulfonyl)-3-methylthiopyrazole.

5 A suspension of 0.50 g (1.42 mmol) of 3,3-bis-methylthio-2-(3-trifluoromethylphenylsulfonyl)acrylonitrile and 0.35 g (1.42 mmol) of 2,6-dichloro-4-trifluoromethylphenylhydrazine in 10 mL of ethanol was heated at reflux for 2.5 hours, solution occurring as the reaction mixture was warmed. The mixture was stirred overnight at room temperature and was then poured into cold water. The product  
10 was extracted into ethyl acetate and the extracts were dried with magnesium sulfate and evaporated. The residues were crystallized from ether, and the product was filtered off and air dried to give 314 mg (40%) of the desired product, m.p. 201 - 203°C. Anal. Calcd. for  $C_{18}H_{11}O_2N_3S_2Cl_2F_6$ : C, 39.28; H, 2.02; N, 7.64. Found: C, 39.35; H, 2.19; N, 7.48.

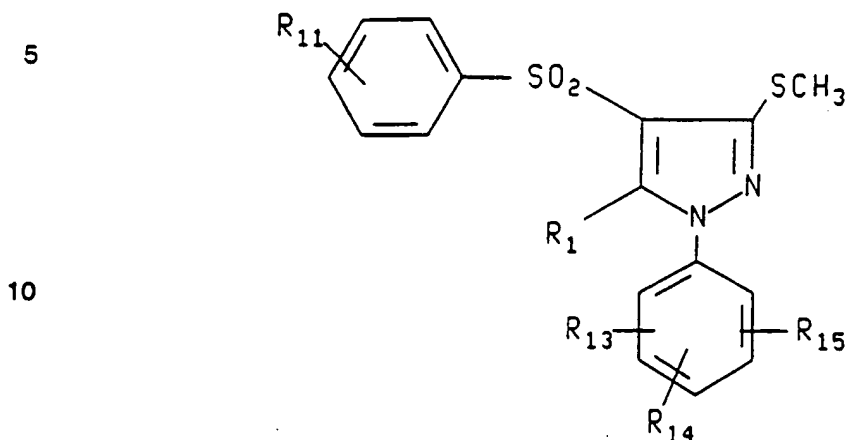

15 E. 5-Dimethylamino-1-(2,6-dichloro-4-trifluoromethylphenyl)-4-(benzenesulfonyl)-3-methylthiopyrazole.

A solution of 0.241 g (0.5 mmol) of 5-amino-1-(2,6-dichloro-4-trifluoromethylphenyl)-4-(benzenesulfonyl)-3-methylthiopyrazole in 5 mL of dry dimethylsulfoxide was treated with 36 mg (1.5 mmol) of oil-free sodium hydride under  
20 dry nitrogen in a flame-dried flask at room temperature. After 30 minutes, a clear, pale yellow solution had formed. This solution was treated with 0.5 mL (8.0 mmol) of methyl iodide and stirred for 1 hour. Then the reaction mixture was poured into water and extracted twice with ethyl acetate. The combined extracts were dried with brine and with magnesium sulfate and evaporated. The residues crystallized from ether to  
25 give the desired product in 81% yield, m.p. 163 - 164°C.

A suspension of 669 mg (1.39 mmol) of 5-amino-1-(2,6-dichloro-4-trifluoromethylphenyl)-4-(2-chlorobenzoyl)-3-methylthiopyrazole in 5 mL of formamide  
35 was heated at  $150^{\circ}\text{C}$  overnight. A pale yellow solid precipitated upon cooling of the

-52-

reaction mixture. A total of 50 mL of water was added to the stirred suspension to  
 5 complete the precipitation of the product which was filtered off and washed with water.  
 An inseparable trace of starting material was observed in the product by thin layer  
 chromatography (TLC) and so the above procedure was repeated on the mixture  
 giving a brown solid containing no trace of starting material. Trituration of this solid  
 with methylene chloride gave a pale yellow solution which was concentrated to give  
 10 the desired product as a white crystalline solid, m.p. 156-158°C.

**Box I Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)**

This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☐ Claims Nos.:  
because they relate to subject matter not required to be searched by this Authority, namely:  
Although claim 10 is directed to a method of treatment of (diagnostic method of (diagnostic method practised on) the human/animal body, the search has been carried out and based on the alleged effects of the compound/composition.
2. ☐ Claims Nos.:  
because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:  
  
./.
3. ☐ Claims Nos.:  
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

**Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)**

This International Searching Authority found multiple inventions in this international application, as follows:

1. ☐ As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. ☐ As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:
4. ☐ No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

**Remark on Protest**

## FURTHER INFORMATION CONTINUED FROM PCT/ISA/

The definition of the following substituent(s) is too general and/or encompasses too broad a range of totally different chemical groups, only partly supported by examples given in the descriptive part of the application:

R<sub>3</sub>, R<sub>4</sub>

The vast number of theoretically conceivable compounds resulting from the combination of all claimed substituents of above list precludes a comprehensive search. Guided by the spirit of the application and the inventive concept as disclosed in the descriptive part of the present application the search has been limited to the following case(s):

R<sub>3</sub>, R<sub>4</sub> = opt. substituted phenyl or naphthyl

Claims searched incompletely: 1-7, 9, 10
